

VET-LAB Seasonal Worm Testing Calendar

A simple planner to help you test through the year. Shaded months show when each test is usually done.

Test	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
Worm egg count (about every two months through the grazing season)												
Liver fluke test (late February to May)												
Wormer resistance test (10 to 14 days after any wormer is given)												

Tips

- Use the worm egg count to decide which horses need treating, rather than worming everyone on a routine.
- Record every result on your yard worm count record sheet so you can spot patterns over time.
- Test the whole yard at the same time where you can, so results are easy to compare.
- This calendar is a general guide only. Your vet or adviser may recommend a different plan for your horse.
